// DOCUMENTATION

DOCUMENTATION

INNOVATIVE DOCUMENTATION FOR PROCESS OPTIMIZATION.

Nowadays, products are developed along a digital process chain. The documentation for the market launch of the product stands at the end of that process chain.

Greater efficiency

With the expertise of DGProject, you can save time and money by using the latest tools, as we are able to create your documentation parallel to the development of the product. Once the design has been approved, you will receive the finished product documentation extremely quickly. Changes to the 3D data can be added to the documentation at short notice.

Customized presentation

You decide how best to present your product to management, clients, suppliers or a trade fair audience:

// with an interactive parts list,
// as an animation on your website or
// as your own product application with an integrated viewer

And you can even rotate elements, zoom in or hide and reveal them. The PDF has 3D functions, HTML files and EXE files with a 3D viewer, all of which can be used interactively. It could not be simpler or more effective for you and everyone else involved.

No investment in additional software

There are no additional costs for software, installation and configuration; you simply use your Internet browser, Adobe Reader or the self-loading file itself.

Your benefits

// You receive from us tailor-made, visually appealing documentation that can be used in a variety of ways.
// You free up your own staff
// You save time and money
// You have an additional presentation and marketing tool at your disposal
// You demonstrate how innovative you are
